

market update

29 November 2023

North Island	The week just gone in Hawkes Bay has left growers wanting for more sunshine and wondering what has happened to the forecast El Nino conditions. South and south westerly winds have dominated, and while the predicted 100 mm of rain didn't eventuate, there was 15-30mm with the larger volumes being closer to the coast. Many people had fires over the weekend to keep the family warm. The overnight low on Sunday was just 2.6°C. This has not helped fruit ripen nor develop good sugar levels. The growing degree day (GDD) accumulation reflects these conditions with only 321 units for Twyford, which is the lowest level of the last four seasons to this date. The week coming has mild and sometimes cool days, no significant rain and potential evapotranspiration (PET) of 3-4 mm/day. A bit more of the same really.
	Marlborough is experiencing a continued steady season and has accumulated 326 GDD units. It's a bit dry, leaving the grape growers wanting a little rain as they go into flowering, but cherry growers are quite happy as they move into harvest. The forecast from Renwick suggests variable temperatures and a bit of rain around at the weekend.
South Island	The more northern growing areas in Central Otago are having a normal or slightly better start to this growing season. The Rockview station has accumulated 239 GDD units which is better than the last two seasons. Further south the totals are a bit flat leaving growers wanting more sunshine to ripen fruit. Like Blenheim the temperatures will not be hot, with cool evenings in Roxburgh and Ettrick. PET should be 3.5–5.0mm/day in Cromwell and Alexandra, and 3-4 mm/day in Roxburgh.
cherries	LOW MED HIGH
	s several varieties being picked now, depending on location. Sonnet, Dawson and Chelan are what is being
 Blenheim growe Stella next wee Burlat and Earli 	se from Central Otago are in market with Fulfur due soon and Chelan a little after that. The firm crunchy
